

CMHC 5337 : Research and Program Evaluation

This course is designed to introduce quantitative and qualitative research designs, methods, and data analysis techniques in counseling. It also introduces students to the use of research to support evidence-based practice and strategies to design and conduct program evaluation. Topics include ethical issues in research, construction and evaluation of measurement tools, critical analysis of research methods and evidence-based counseling practices, use and interpretation of descriptive and inferential statistics, analysis and synthesis of qualitative data, outcome measures, needs assessments and program evaluation methods.
