GCSE 5303 : Organizational Resilience and Incident Response

The focal point of this course will be to develop an understanding of business continuity, and cyber incident response under an overall organizational resilience framework. First students will compare various organizational resilience frameworks NIST, ISO (International Standards Organization), BSI (British Standards Institute) and then apply one of these frameworks in a simulated environment. Then using the selected framework students will manage a cyber-breach incident and conduct an after action 'hot wash' to determine operational success or failure of the selected framework against the threat.
