

ECON 3344 : Introduction to Econometrics

This course provides an introduction to econometric principles and methods. It aims at teaching students how to develop and statistically estimate various economic and financial models for use in policy analysis and forecasting. The course will cover both the classical econometric techniques as well as their more modern time series variants. Prerequisites: Junior standing, [MATH 2435](#), [MATH 3332](#), [ECON 1331](#) and [ECON 1332](#)
